

# Self-Care and Stress Management During the COVID-19 Crisis

Increased anxiety is common as we navigate COVID-19 and the broad impacts to our communities. It is a normal, natural response to have increased emotions during this time of uncertainty, including feeling stressed, worried, sad, scared, disappointed, and confused. The more we focus on what is out of our control, the more stressed and anxious we begin to feel. Your well-being and emotional resilience are essential to our patients as we work to help our communities through the COVID-19 pandemic. Here are a few recommendations for stress management during this time.

## Self-care is especially important.

- Schedule and take brief relaxation breaks at work. A few minutes of a break during a shift can be calming. Even a 5-minute walk can improve energy and focus.
- Take time each day to do something that brings you joy, even if just for a brief moment.
- Maintain a healthy diet; bring your own meals to work.
- Keep your schedule of daily activities as regular as you can.
- Get some sunlight.
- Try chair yoga or stretching at work.
- Get regular exercise. Try walking or biking to work if you can.
- Avoid or limit use of alcohol and caffeine.
- Monitor yourself for excessive fatigue, irritability, poor focus, or anxiety.
- Pace yourself.
- Take a moment for a slow breath before entering a work area, entering a patient room, or clocking out. This can be difficult while wearing personal protective equipment like a mask, but breathing is calming and helps your body cope with physical symptoms of stress. If you regularly see a mental health professional, video visits or a phone call may be a good idea.
- If you do not regularly see a mental health professional but feel doing so could be helpful at this time, many mental health providers are offering free sessions for health care workers.
- If a spiritual practice is important to you or has been in the past, work it into your regular routine.

## Manage the cognitive impacts of stress:

- Limit the intake of news; doing so can help manage difficult or upsetting feelings. The constant intake of frightening information can create more stress.
- Connect to reliable sources of information.
- Focus on what is within your power. Wash your hands frequently with soap and water or with an alcohol-based hand sanitizer; try to maintain a 6-foot distance from someone who is coughing or sneezing to prevent the spread of germs; and prevent yourself from touching your face.
- Check in with anxiety-provoking statements and reframe them to be statements that better reflect the evidence. This can reduce stress and increase coping abilities. For example, reframe, “my family will get the virus and die” to “the majority of people who get the virus recover.”

## Create networks of social support. Social connections are important to our emotional well-being, especially in times of stress:

- Share your concerns and problem-solve with colleagues, family, and friends. Together, plan steps to manage difficulties.
- Lean on each other. You will be there when your colleagues need help, so count on them to be there for you.
- Find ways to connect with friends and family. Meaningful interactions with loved ones are important to our well-being.
